

The **HAWKER® Sequencer™** is managed by a microprocessor that automatically recognizes and determines the sequence in which batteries will be recharged and/or equalized. It maintains control of the charger and indicates when the specific batteries are available for use.

HAWKER®
Leading Edge Power Solutions

The **HAWKER® Sequencer™** operates with a “FIFO” first-in, first-out logic and will automatically handle the first battery connected to be the first battery completed.

Part

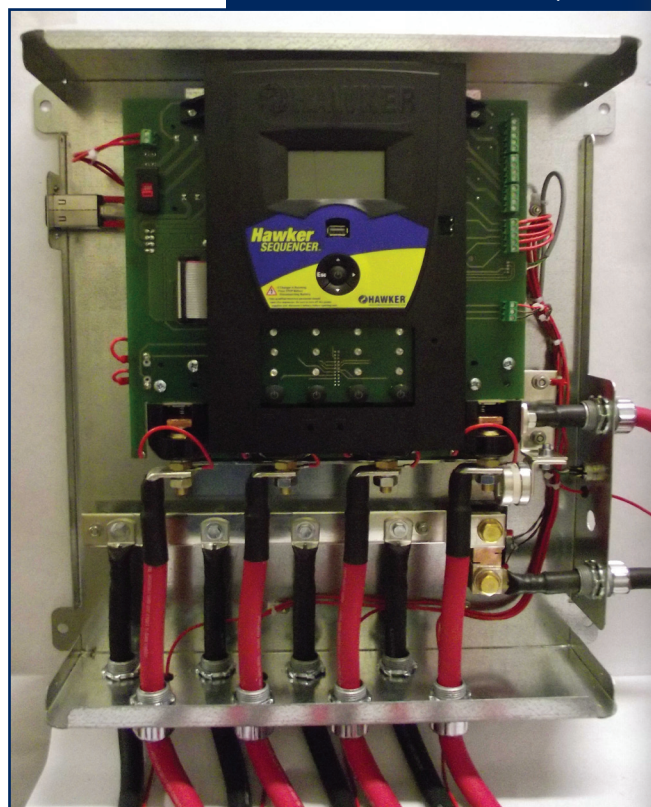

- SQ3504 4-Port (for 4 batteries)
- SQ3502 2-Port (for 2 batteries)

The **HAWKER® Sequencer™** has a one (1) year warranty on parts and labor from the date of purchase.

The **HAWKER® Sequencer™** features the following:

- Visually displays battery status: battery currently on charge; battery charge complete and available for use; or battery waiting to be charged.
- Provides real-time charger data to help determine battery condition.
- Override switches allow for manually stopping battery charge and/or disabling one battery from the sequencer.
- Programmable through a front panel, push button LED/LCD display.
- Includes a real-time clock for the most efficient and effective use of charge times.
- Controls can be programmed for specific data/charger functions.
